ApplyNow

Admissions Portal

A responsive frontend admissions experience built with React, Tailwind CSS, React Router, Axios, and JSON Server.

Frontend Internship Project

Project Overview

ApplyNow streamlines the applicant journey from application form completion through confirmation and status tracking, while providing an admissions-office interface for reviewing submitted applications.

Core objectives

- Build a clear, responsive admissions experience.
- Manage a multi-step form without losing entered data.
- Validate applicant information before submission.
- Integrate Axios with a JSON Server mock API.
- Provide applicant and admin status workflows.

Key Features

Applicant	Administration
Three-step application	Application list
Form validation	Status filters
Submission confirmation	Application details
My Status dashboard	Approve / Reject actions
Loading & error states	Review workflow

Technology & Architecture

Technology stack

- React + Vite — component-based frontend
- Tailwind CSS — responsive UI styling
- React Router — application navigation
- Context API — shared multi-step form state
- Axios — HTTP communication
- JSON Server — mock REST API
- Vitest + React Testing Library — automated testing

Flow: React UI → Router/Context → Axios service → JSON Server → db.json

Quality & Testing

The project includes automated tests covering validation, application flows, dashboard behaviour, confirmation, administration, and application review.

Test area	Coverage
Validation	Personal, academic, guardian rules
Application	Step navigation and successful submission
Confirmation	Redirect and submission information
Dashboard	Loading, empty, success, error, status
Admin	Listing, filtering, errors, review links
Details	Loading, details, approve/reject, update errors

Verified result: 6 test files passed — 47 tests passed.
